

Camilla Supplement and Treatment

Supplements Camilla

1) Coriolus vestibucolor

Coriolus versicolor mushroom extracts

2 capsules daily, one in morning & one at night

(recommended canine dose: 100mg per 1kg of dog's weight)

Informations and studies:

www.upenn.edu/pennnews/news/compound-derived-mushroom-lengthens-survival-time-dogs-cancer-penn-vet-study-finds

www.bastyr.edu/news/general-news/2012/11/fda-approves-bastyr-turkey-tail-trial-cancer-patients

www.cancer.org/treatment/treatmentsandsideeffects/complementaryandalternativemedicine/dietandnutrition/coriolus-versicolor

http://mykotroph.de/Krebs_beim_Tier.html

Where to buy:

Asia/US: www.imyunityfordogs.com

Europe: www.mycovital.de/vitalpilze/coriolus/ www.oriveda.ch/coriolus_psp.php

Ling: „Besides Coriolus Versicolor, the most common mushrooms used to treat cancer are these four mushrooms:

(1) Lingzhi (also known as reishi or Ganoderma lucidum),

(2) Maitake (other name: Grifola frondosa),

(3) Shitake (Lentinus edodes)

(4) Cordyceps (other name: Cordyceps sinensis).“

Mixture of different mushrooms – half a spoon per day as prevention

www.amazon.com/Transfer-Factor-Tri-Factor-Formula-capsules/product-reviews/B002QH4T48

www.4life.com/us/products/detail.aspx?ShoppingGroupId=0&ShoppingSubGroupId=252

Also Agaricus blazei Murill ABM seems to be a good mushroom to fight cancer.

http://mykotroph.de/Tiere_agaricus_blazei_murill_ABM.html

2) The Reishi extract

Ling: (also known as lingzhi) is a different mushroom which is also used to fight cancer.

<http://www.ncbi.nlm.nih.gov/pubmed/16351502> You can alternate there reishi/lingzhi with the Yunzhi. So if you give one capsule of Yunzhi in morning, and no Yunzhi at night, you can replace with one capsule of lingzhi at night.

3) Essiac

Informations

www.caninecancer.com/essiac.html

www.healthfreedom.info/cancer%20essiac.htm

www.cancer.org/treatment/treatmentsandsideeffects/complementaryandalternativemedicine/herbsvitaminsandminerals/essiac-tea

Ling: „Essiac dosage - Dr Karen Becker said one capsule 2 times a day with food. But with all supplements, please don't start with the full dose. Start slowly, only half dose first, make sure there's no negative reaction before slowly building to full dose. I suggest that you give only one capsule one time a day with food. If after 3 days, there's no negative reaction, then give the recommended dose of a capsule two times a day. This is the link with the recommended dosage. It is like Dr Becker suggest for Ruffles:

https://essiacforpets.com/?page_id=1127

When you give Essiac, you must allow the dog to have access to clean drinking water all the time. Most herbs need to be taken with water. Possible side effects of essiac is diahorea, breathlessness and nausea. If you see this, you must stop immediately.“

4) The Symbiotics Candida Balance

Ling: this is a combination of colostrum and probiotics. Colostrum is like the mother's "first milk" which is good for boosting immunity. http://www.naturalnews.com/009912_Colostrum_immune_system.html And probiotics is very important in boosting gut health. <http://newsroom.ucla.edu/releases/ucla-research-suggests-that-gut-bacteria-could-help-prevent-cancer> If Camilla is taking antibiotics, please give this at least 2 hours

before or at least 2 hours after she takes her antibiotics. The antibiotics will kill off the probiotics, which is why it is very good for Camilla to take some probiotics now. But give it at least 2 hours apart so the antibiotics will not kill the probiotics.

5) Ester C with cranberry

Ling: I like this brand because it contains non-acidic vitamin C. Vitamin C is a very good immune booster.

<http://www.cancer.gov/about-cancer/treatment/cam/patient/vitamin-c-pdq>

6) Melatonin

Ling: give once daily before bedtime (it doesn't have to be with food). It is good for calming the dog (which is why it is also used in holistic cushings treatment), and also used as cancer-fighting supplement.

http://www.lifeextension.com/magazine/2004/1/report_melatonin/page-01

7) Sam-E

<http://www.lef.org/Magazine/2014/4/Beyond-Depression-SAMe-Broad-Spectrum-Protection-Against-Disorders-Of-Aging/Page-01>

s-adenosylmethionine

Sam-E is also good for soft tissue support and arthritis and joint support. But side effect is that it is good for the mood.

Dogs that are sick sometimes get depressed. So most vets in the USA prescribe it to help the mood, as well as helping the liver. I forgot to mention it's good for liver function too.

The dosage for the Sam-e is correct for Scotties - 200mg once a day. You can hide in his food.

http://www.vetofood.ch/de/catalogue.php?s_clear=1&s_keyword=same&s_animal_id=&s_marque_id=&s_pat_hologies_id=&s_gamme_nom=&s_size=&s_age=&s_categorie

8) Curcuma

Curcuma is similar to Wobenzym

You can make it fresh – it's important to mix it with a bit pepper

1 gram = 1 espresso spoon Kurkuma, 1 pinch black pepper, a few drops of oil – all together mixed with boiling water.

Or buy capsules (1 capsule/day)

http://www.amazon.com/Doctors-Best-Curcumin-BioPerine-120-Count/dp/B000BD0RQS/ref=sr_1_1?ie=UTF8&qid=1422958059&sr=8-1&keywords=curcumin+c3+complex

9) Wobenzym P

Proteolytic enzyme therapy for detoxification, to control inflammation and to treat cancer

Optimal dosage from Ling: „4 pills twice a day on empty stomach (at least one hour before or after food). Must taper in – starting with 1 pill daily, increase to 1 pill twice a day, then 2 pills twice daily etc“

My alternative vet said that the white Wobenzym pills are better than the red ones (the red colorant seems to be not so good) not a priority because you must take so much before you have effect.

10) Omega Fish Oil

Ling: „For Omega, 500mg once a day. You can squeeze out the oil and add to his food. Please don't give more than 500mg once a day. Actually oil helps the absorption of CoQ10 - so I like to give the omega at the same time as coq10.“

. I like to give only on alternate days. The problem with fish oil is that too much is no good, so don't give too much.

www.amazon.com/gp/product/B002FU6I9K/ref=ox_sc_act_title_1?ie=UTF8&psc=1&smid=ATVPDKIKX0DER

<http://www.newchapter.com/fish-oil/wholomega>

11) CoQ10 50mg

for the heart and for cellular energy (ideally given with fish oil for better absorption)

CoQ10 50mg capsule, CoQ10 is for cellular energy and the heart.

CoQ10 - this is for the heart but also good for cellular energy. The problem with cancer is that it depletes the nutrients from the healthy cells. So coQ10 replenishes cellular energy. 50mg a day dosage is enough for a Scottie.

<http://www.lifeextension.com/magazine/2009/9/coq10-and-cancer-treatment/page-01>

<http://www.co-enzym-q10.com/wirkung.html>

12) Essential Oils

Finally, the essential oils. I have read a lot of research that shows dogs with cancer live longer if the household continues to be calm and happy and relaxed. Cancer is always so shocking and so sad, but we try not to focus on it too much. Just give the supplements twice or three times a day, and then forget about the cancer!! Continue agility and play and walks. I find the essential oils helps to create a nice atmosphere at home.

13) Iscador – misteltoe

Informations

http://www.cancerplants.com/herb_news/Iscador.html

A 1ml shot subcutan every second day. He has now the Qu Series.

Behandlungsplan

Starting with Essiac, Coriolis and Curcumin is good. I actually to prefer to start one at a time. For example, start only Essiac, watch for 2 days, preferably 3 or 4 days. If she has no problem, then add Coriolus, then watch 2 to 3 days, then if no problem, start Curcimin. Then wait another 2 to 3 days, then start your next supplement. If you start one supplement at a time, it is easier to monitor if she has another adverse reactions. For example, if her appetite is no good, vomiting, lethargic or diarrhoea, you can stop that new supplement and see if she improve. If she improve, you know she cannot take that supplement, or maybe you just need to reduce the dose.

Please check with the doctor if you start Camilla on chemo

For chemo, I know it is ok to take the yunzhi (coriolus), reishi (lingzhi), vitamin C, probiotics, coQ10, melatonin, colostrum.

I am not sure about essiac, SAME, milk thistle & Wobenzyme

Mistletoe	

Weitere Ideen

1) Aspirin low dose

Some vets will tell you that Aspirin is dangerous for dogs as it can cause bleeding in the stomach. But a very low dose seem to be a very effective cancer medication.

Maybe the empirial research is not so interested to study this as Aspirin is too cheap.

Flash got 10mg per day (8kg). Piroxicam erfüllt wahrscheinlich eine ähnliche Funktion (cox inhibitor)

Nutrition

There are many different theories what to feed and not to feed. Here some often heard theories:

Avoid carbohydrates, and increase good proteins

Ling „Research in both dogs and humans have discovered that sugar makes cancer (and tumours) grow very fast. So Flash has to eat less carbohydrates because it convert to sugar easily. Cancer loves sugar so you need to eliminate as many sugars as possible. This includes all simple carbohydrates such as white rice, potatoes, pasta, flour and the grains in dog foods. He need a higher protein diet because cancer make the body burn protein very fast and he will lose muscle very fast. Surprisingly fat is OK. If his liver enzyme readings are OK, he can take fatty food, but he cannot take sugar.“

Salmon is a good proteine as a natural source of Omega Oil

Add vegetables

Study about the preventive function of vegetables for bladder cancer:

www.ncbi.nlm.nih.gov/pubmed/16013542

Juice

I am seeing shrinkage of tumours on two of my dogs without side effects.

The ingredients are:

Dandelion leaves (Löwenzahn)

Kale leaves (Grünkohl)

Spinach leaves

Blueberries (heidelbeeren)

Ginger powder

Coconut oil

Cucumber

Apples

Banana

Borage leaves (Gurkenkraut, Borretsch)

Turmeric

Cayenne pepper
